

Python_RPi

Introduction

There are three examples under this folder.

1) Beginner

A clean and simple example for beginners to start with NSP32, to demonstrate the basic usage of our API.

2) ConsoleDemo

A console program to demonstrate full functionalities of NSP32. Users can operate NSP32 by interactive console commands.

3) SpectrumMete

A GUI program to visualize the spectrum measurement using NSP32.

API Module Location

Our API module file is located at [/examples/NanoLambdaNSP32.py].

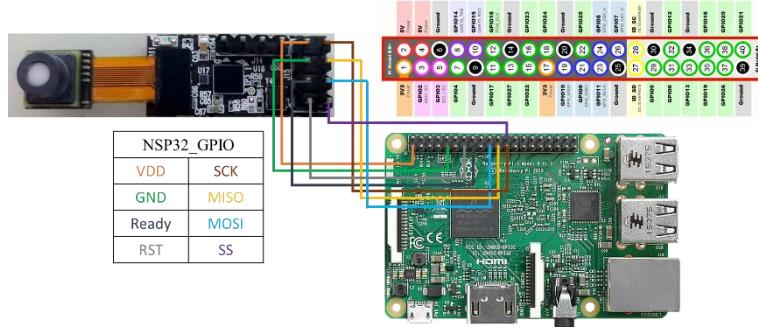

Hardware Setup

1) Tested on

- Raspberry Pi 3 Model B with Rasbian Stretch version November 2018
- Raspberry Pi Zero W with Rasbian Stretch version November 2018

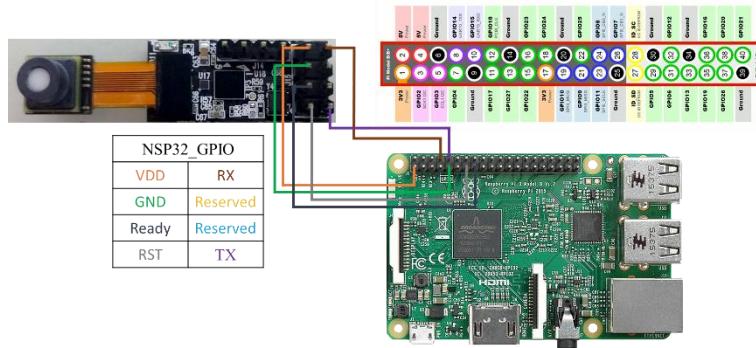

2) Setup

i) Hardware connection with SPI

ii) Hardware connection with UART

Python_RPi

The following table shows the general pin connections between NSP32 and RPi.

GPIO		Hardware	NSP32 Pin	RPi
Power	VDD	VDD3V3		3V3
	GND	GND		GND
Data channel	SPI Signal	Wakeup/Reset	RST	GPIO27 (Pin 13)
	SPI Signal	SPI SSEL	SS	SPI0_CE0_N
	SPI Signal	SPI MOSI	MOSI	SPI0_MOSI
	SPI Signal	SPI MISO	MISO	SPI0_MISO
	SPI Signal	SPI SCK	SCK	SPI0_SCLK
	SPI Signal	Ready	Ready	GPIO22 (Pin 15)
UART Signal	UART Signal	Wakeup/Reset	RST	GPIO27 (Pin 13)
	UART Signal	UART RX	TX	UART0_RXD
	UART Signal	UART TX	RX	UART0_TXD
	UART Signal	Ready	Ready	GPIO22 (Pin 15)

Software Setup

- 1) Runs on
Python 3.5.3
- 2) Setup
 - i) Install Python 3.5 or above (Python 2 doesn't work).

Use the terminal command:

```
$sudo apt-get install python3
```

Note: The examples and the API utilizes the following modules, please make sure they are installed under your environment.

- RPi.GPIO [<https://pypi.org/project/RPi.GPIO/>]

Use the terminal command:

```
$sudo apt-get install python3-rpi.gpio
```

Python_RPi

- spidev [<https://pypi.org/project/spidev/>]

Use the terminal command:

```
$sudo apt-get install python3-spidev
```

- pySerial [<https://pypi.org/project/pyserial/>]

Use the terminal command:

```
$sudo apt-get install python3-serial
```

- ii) Make sure to enable SPI on RPi by the following steps.

- i. Use the terminal command:

```
$ sudo raspi-config
```

- ii. Under the Software Configuration Tool, select:

Interfacing Options → SPI → Yes → Ok.

- iii) Make sure to enable UART (disable serial login shell, enable serial interface) on RPi by the following steps.

- i. Use the terminal command:

```
$ sudo raspi-config
```

- ii. Under the Software Configuration Tool, select:

Interfacing Options → Serial → No → Yes → Ok.

Notes

Source code modification is required if you want to change the pin numbers or the data channel type (default to SPI). For your convenience, we have marked these code sections with the title "modify this section to fit your need".

Run the Example

To run the examples, use Python commands:

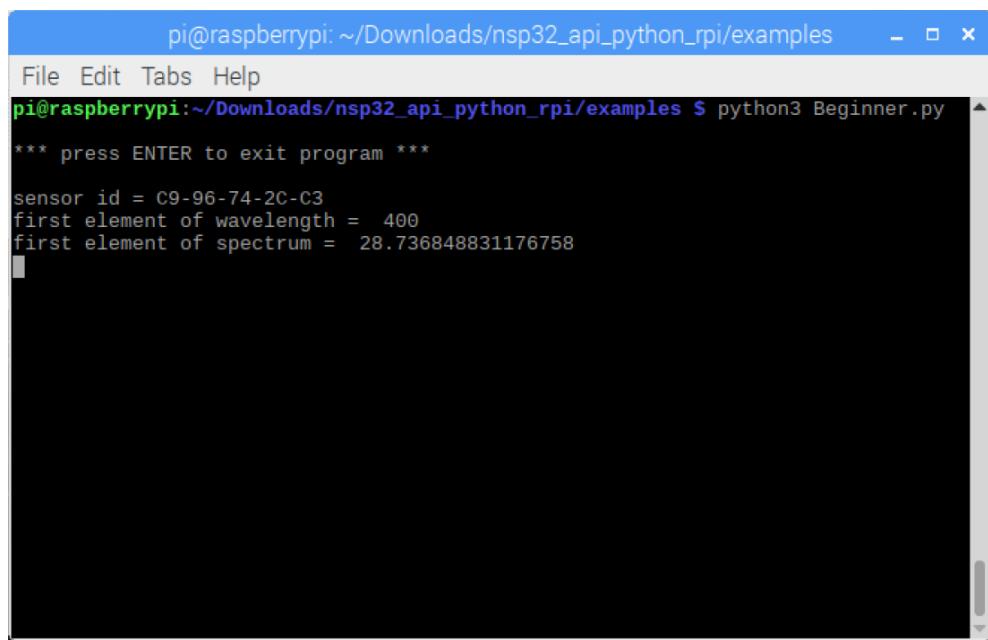

```
$ python3 Beginner.py
```

```
$ python3 ConsoleDemo.py
```

```
$ python3 SpectrumMeter.py
```

Python_RPi

X, Y, Z = [88.22, 95.57, 93.48]

*****
1) standby - standby NSP32
2) wakeup - wakeup NSP32
3) hello - say hello to NSP32
4) sensorid - get sensor id string
5) wavelength - get wavelength
6) spectrum - start spectrum acquisition and get the result data
7) xyz - start XYZ acquisition and get the result data
8) exit - exit program
```
